

Hi, I am **MARIJN DEGEN**
Advanced web programmer
and network manager.

My career so far

My educations and my internships.

HBO – HAN UNIVERSITY OF APPLIED SCIENCE

September 2016 to Present

Web development

What I really like on my current education is learning new technologies, but also the principles of developing applications in a team (with SCRUM). I choose web development instead of software development because I think making applications cross platform is really cool in general and what is more cross platform than the web?

MBO – ROC NIJMEGEN THE SCHOOL OF LIFE

September 2013 to July 2016

IT administrator & media – level 4

During this time I had three successful internships and I learned the following things:

- Windows server 2012 R2
- Cisco CCNA 1 & CCNA 2 certification (network principles)
- Basic programming with java & PHP

Zoolt / FixPart

County: The Netherlands

Date: 08/2021 – 2/2022

Tasks: Researching, implementing and testing a new video stream service, the service will be used between a customer with a defect appliance and a mechanic. The endgoal of the service is to repair the defect appliance. Aside from videocalling it is also possible to send visual instructions.

Savvii

County: The Netherlands

Date: 07/2020 – 2/2021

Tasks: Giving customers advice, monitoring server statuses, writing webserver configurations and solving general hosting problems.

Vathos Robotics

County: Germany

Date: 09/2019 – 2/2020

Tasks: Researching, implementing and testing a new Android app that manages production robots based on AI. Maintaining existing functionality.

Have a Look at my skills and projects

Programming and network management has been my passion for the past 8 years!!

Full stack web programming

Writing new websites and tools with the newest coolest javascript technology has become a hobby of mine, aside from the career aspect. Especially react & end-to-end testing really fascinates me, writing a rest API in a new programming language or framework is always a fun thing to learn.

Embedded solutions and IOT

When I face practical problems in life, I always try to think of an IOT solution that would solve the problem and maybe even harvest data for big data purposes, arduino and raspberry are my favorite tools.

Blockchain projects

In 2018 I had the honour to make a voting project based on blockchain, we as a project group choose ethereum, at that time I took responsibility for the communication between the blockchain smart contracts and the java backend.

Network management

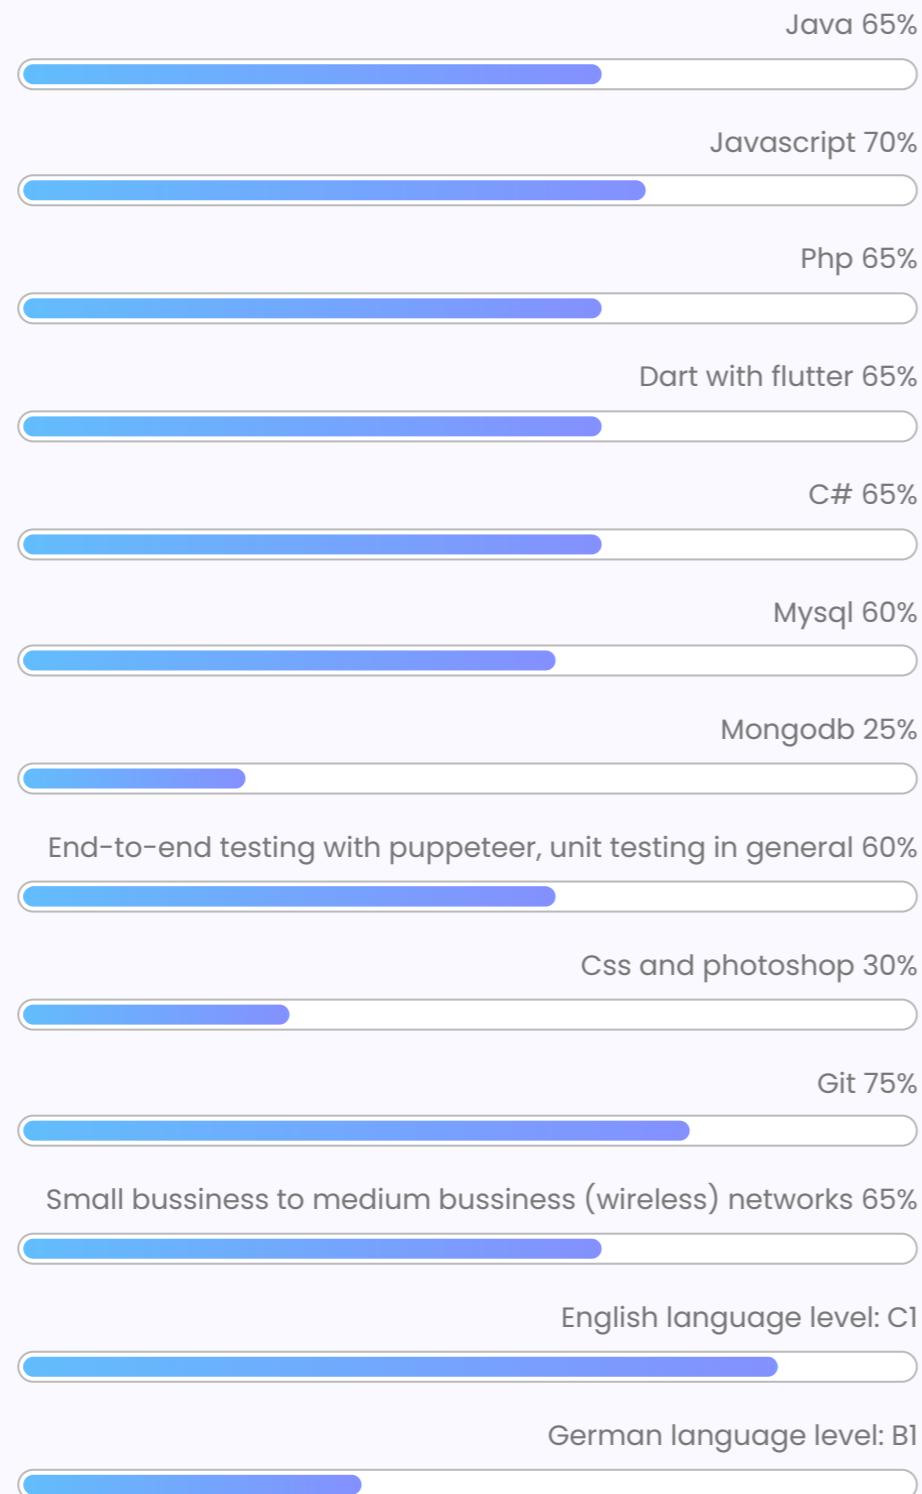

After graduating in 2016 for my network management degree I decided that I wanted to become a complete technical person. This does not mean that I left this working field altogether, I am still ambitious to setup new networks, IP cameras and network attached storages when I am not programming.

About my career

Helping people with computer problems convinced me to be more dedicated to computers, programming and networks.

Programming and general skills

The percentage represents how comfortable I feel in programming with this topic.
